Accessibility Statement

Green Levers is committed to making its website accessible and inclusive, so that as many people as possible can use it, regardless of ability, technology, or experience.

What we mean by accessibility

By accessibility, we mean the ease with which visitors can find, understand and use the information on our website. We aim to ensure that our content is clear, straightforward, and usable for people with different needs, including those using assistive technologies, those accessing the site on different devices, and those whose first language is not English.

What we are doing

We aim to design and maintain our website so that it:

- Works with common assistive technologies
- Is usable across a range of devices, browsers and screen sizes
- Uses clear language and simple navigation where possible

We follow good practice in web accessibility and consider accessibility as part of our ongoing website development.

Limitations

Green Levers is a small and growing organisation. While we aim to make our website as accessible as possible, we recognise that some content or features may not yet fully meet accessibility standards. We are working to identify and address barriers where possible and within our capacity.

Using your browser's accessibility tools

Most modern web browsers include built-in accessibility tools that allow you to adjust how websites are displayed, such as changing text size, colours, or zoom level. You can find information about these tools in your browser's help menu.

Feedback and contact

If you experience any difficulty accessing information on this website, or if you have suggestions for how we can improve accessibility, please contact us:

Email: contact@greenlevers.org

If possible, please let us know which page you were trying to access and the issue you encountered. We will do our best to respond and, where feasible, provide information in an alternative format.

Ongoing improvement

We review our website content and structure periodically and will continue to improve accessibility over time. New content will aim to meet accessibility good practice wherever possible, and older content will be updated as resources allow.
